

Attachment Points. We (UW) still have not figured out exactly how this will attach to our structure. The minimum is two (4-40) bolts in these locations. The spacing from center to center is 3.500"

Interface with structure up to you.
The interface below is what UW is
doing based on solar cell layout.
The BACK of the structure is the
fixed dimension (due to the spark
plug). The PPT will stick out 0.80"
from that point.
