Tel: (540) 231-1616

Professional Preparation:

- **California Institute of Technology**, B.S., Physics 1998
- **California Institute of Technology**, Ph.D., Control and Dynamical Systems 2004
- **University of Southern California**, NSF Mathematical Sciences Postdoc 2004-2006
  Department of Aerospace and Mechanical Engineering

Appointments:

- **Virginia Tech**
  - Department of Aerospace and Ocean Engineering
    - Professor 2019-
  - Department of Biomedical Engineering and Mechanics
    - Affiliate Professor, Engineering Mechanics graduate program 2019-
    - Professor & Director of Engineering Mechanics graduate program 2017-2019
    - Associate Professor & Director of Engineering Mechanics graduate program 2016-2017
    - Associate Professor 2014-2016
  - Department of Engineering Science and Mechanics
    - Associate Professor 2012-2014
    - Assistant Professor 2006-2012
  - Department of Mathematics, Affiliate Professor 2018-
  - Department of Mechanical Engineering, Affiliate Professor 2011-
  - Interdisciplinary Center for Applied Mathematics, Affiliate Professor 2011-

Visiting Positions

- Visiting Faculty, Instituto de Ciencias Matemáticas (ICMAT – Institute of Mathematical Sciences), Universidad Autónoma de Madrid, Spain, Aug-Dec, 2013.
- Visiting Faculty, Centre de Recerca Matemàtica (CRM – Center for Mathematics Research), Universitat Autónoma de Barcelona, Spain, Nov-Dec, 2008.

Awards, Prizes, and Recognition

- 2017 Excellence in Research Award, Virginia Tech College of Engineering Dean's Award
- 2017 Leader in Research Award, Virginia Tech Dept. of Biomedical Engineering & Mechanics
- 2015 Virginia Tech Scholar of the Week
- 2015 Leader in Scholarship Award, Dept. of Biomedical Engineering and Mechanics
- 2012 Liviu Librescu Prize, Dept. of Engineering Science and Mechanics
- 2012-2015 Faculty Fellow, Virginia Tech College of Engineering Dean's Award
- 2012 Certificate of Teaching Excellence, Virginia Tech College of Engineering
- 2012-2017 NSF CAREER Award (Faculty Early Career Development Program)
- 2011 Plenary Speaker on Computational Methods in Dynamics at Abdus Salam International Centre for Theoretical Physics, Trieste, Italy
- 2011 Keynote Speaker at Lorentz Centre Workshop on Coherent Structure and Dynamical Systems, Leiden, The Netherlands
- 2010 Outstanding New Assistant Professor, Virginia Tech College of Eng. Dean's Award
- 2009 Invited Speaker at British Science Festival
- 2009 Virginia Tech Faculty Authors Recognition List
- 2008 Invited Speaker at Zurich Physics Colloquium
- 2008 Virginia Tech Faculty Scholar of the Week
- 2005 Recognized for interdisciplinary research accomplishments in NSF press release, Mathematics Unites the Heavens and the Atom (Sept 29, 2005)
- 2004-2006 NSF Mathematical Sciences Postdoctoral Research Fellow
- 2004 Everhart Lecture Series Winner, 'The Interplanetary Transport Network', Caltech, 2004
- 2003 NASA Space Act Award, 'Low-Energy Interplanetary Transfers Using Lagrangian Points'
- 2002 NASA Innovation Award, 'Low-Energy Transfer from Near-Earth to Near-Moon Orbit'
- 2001 Best Paper Award by American Astronautical Society/American Institute of Aeronautics and Astronautics Astrodynamics Specialist Conference, Quebec City, Canada
- 1998 NASA Innovation Award, 'Planetary Capture and Interplanetary Transfer Using the Invariant Manifold Structures Around L1 and L2'

Faculty interviews, requests to interview, and offers, other than present position

- *Science Daily*, "Math Unites The Celestial And The Atomic", September 28, 2005
- *Science News*, "Navigating Celestial Currents", April 18, 2005

Selected Leadership

In August 2016, Ross became the director of the Engineering Mechanics Graduate Program, which currently has about 70 graduate students. Under Ross' leadership, the following accomplishments occurred in 2016-2019.

- *Nearly Triple Applications Growth.* Using new digital marketing strategies, Ross reversed a downward trend in applications to the program. While all other VT engineering graduate degree programs saw their application numbers generally decrease over this time, the total number of applications (100) for EM in 2019 was 3x what it was in 2016, the highest demand for EM graduate program on record, and the number of domestic applicants more than tripled the best previous number.

- *Prospective Student Weekend.* Ross initiated a new Prospective Student Weekend in the Fall, to encourage graduate applications from high-achieving college seniors from across the U.S. In its inaugural year (2017), we had 50 applicants, and were able to bring in 15 students to visit with faculty, hear about research, tour labs, meet our students and get excited about our program and Virginia Tech.
- *Securing Early Multi-Year Offers to Enhance Student Diversity.* With financial assistance of the COE and the Grad School, Ross secured several multi-year offers for high quality prospective students who enhance departmental diversity, including an Associate GEM Fellow, an ICTAS Fellow, and Cunningham Doctoral Scholar.
- *Revised Engineering Mechanics PhD Curriculum.* Ross oversaw the governance process for a new and improved Engineering Mechanics PhD curriculum, meant to increase flexibility and diversity in the applicant pool. This governance process included 3 new courses, and some revisions to existing courses, and a new format for the preliminary exam. The revised curriculum was made official in 2017.
- *Initiated EM Graduate Student Organization.* Previously the EM students had no student organization. Ross helped initiate the new graduate student organization, Graduate Engineering Mechanics Society (GEMS). Ross mentored the groups founder and president, Gary Nave. The organization will allow EM students to network and pursue professional development activities, and should help with student retention via an improved sense of solidarity and community.

Selected Outreach and Professional Service:

- Dr. Ross founded an interdisciplinary graduate education program on biological transport (called Biotrans) that began in 2010 and has now cross-trained over 25 PhD students at the engineering-biology interface. He helped shepherd the program's transition to sustained internal funding, contributing to an infrastructure of interdisciplinary discovery at the intersection of engineering and biology which will have impacts for years to come.
- Dr. Ross has spoken to thousands of people at dozens of universities worldwide including MIT, Caltech, Stanford, Cornell, Princeton, UCLA, Duke, Univ. of Michigan, Univ. of Maryland, Texas A&M, UNC Chapel Hill, TU Munich, Univ. of Toronto, Univ. of Warwick, ETH Zurich, and Univ. of Barcelona, and at several prestigious international forums, including the British Science Festival and the Zurich Physics Colloquium. His research has been featured in the pages of *Science, Scientific American, New Scientist, Science News, American Scientist, Astronomy, the Times of London*, the BBC, and several other international news outlets, including those in India, Russia, Finland, Poland, Turkey, Brazil, and China.
- Dr. Ross has given several 'popular science' level presentations, including several to K-12 schoolchildren in southern California, underrepresented Math/Science Upward Bound high school students in the Los Angeles area, and an Everhart Distinguished Graduate Lecture on the future of space travel in 2004 in Pasadena, CA (available online as a video presentation), and a college-wide convocation at Centre College. Based on these lectures, wrote a feature article in *American Scientist* (2006), disseminating to a large audience recent work on the 'new' mathematics of space travel, which incorporates ideas of transport from fluid dynamics and chemistry.
- Dr. Ross' work on orbital dynamics initiated the dominance of dynamical systems methods for mission design among the international space flight mechanics community, particularly invariant manifold theory, for which he has received several awards from NASA. To widely disseminate these results, he co-authored an open-access book on the subject, *Dynamical Systems, the Three-Body Problem, and Space Mission Design.*

- Ongoing participation in several outreach activities in connection with dynamical systems theory and applications, including a multimedia web site (`www.whydomath.org`) that introduces mathematics and computational science topics at an upper high school / lower collegiate level. The web site focuses on exciting applications that showcase mathematics and computational science tools used to solve problems across a wide range of scientific and humanist disciplines.
- Research mentor for high school teacher and students. Mentored a high school teacher and high school students in 2017-2018 through a NSF RET (Research Experiences for Teachers) program "Biomechanics from molecular to organismal scales" at Virginia Tech. The project was on using additive manufacturing and off-the-shelf components to develop a bimodal payload dispersal platform inspired by the autorotation observed in maple seeds.
- Co-coordinating and delivering an ambitious program at a local Virginia high-school called YEAH!-SEM (Youth Exploring the AtmospHere through Scanning Electron Microscopy), an innovative outreach program to attract and retain students at the interface of aerobiology and engineering.
- Reviewer for NSF, NASA, AFOSR, ONR, and ARO (2008-present).
- Associate editor for *Communications in Nonlinear Science and Numerical Simulation* (2014-2017)
- Invited technical reviewer for journals *Nature, Nature Physics, Scientific Reports, Physical Review Letters, Physical Review E, Applied Mechanics Reviews, Journal of Fluid Mechanics, Journal of the Royal Society Interface, Chaos, Physica D, Physics Letters A, Nonlinear Dynamics, Journal of Nonlinear Science, International Journal of Non-Linear Mechanics, Discrete and Continuous Dynamical Systems, Dynamical Systems: An International Journal, Applied Mathematical Modeling, Autonomous Robots, Journal of Biomechanics, Acta Astronautica, New Astronomy, Icarus, Advances in Space Research, Celestial Mechanics and Dynamical Astronomy.*
- Invited participant in an NSF-sponsored retreat/workgroup in August 2007 on cognitive and behavioral dynamics, which brought together a handful of dynamical systems experts and experts in the cognitive and behavioral sciences.
- Session co-organizer, "Theoretical, observational, and numerical techniques in geophysical flow analysis", AGU Fall Meeting, San Francisco, 2012
- Session organizer, "Geometric and probabilistic methods in flow dynamics", International Conference on Flow Dynamics (ICFD), Sendai, Japan, 2012
- Organizer of several venues related to biology and mechanics, including the minisymposium, "Mechanics in biology", Pan American Congress on Applied Mechanics, Port of Spain, Trinidad, 2012, and two USNCTAM AmeriMech workshops by the same name at Virginia Tech, in 2013 and in 2014
- Member of the Society for Industrial and Applied Mathematics, American Physical Society, American Mathematical Society, American Astronautical Society, and American Institute of Aeronautics and Astronautics.

Courses Taught

Student teaching evaluation above Virginia Tech College of Engineering average

- ESM 3124 Dynamics II - Analytical and 3-D Motion (10-12,14-15)
- ESM 5314 Intermediate Dynamics (07-12,16,19)
- ESM 5984 Fundamentals of Mechanics (12)
- ESM 6314 Advanced Dynamics (07-12,14-17, 19)

- ESM 6984 Frontiers of Dynamical Systems (13-14)
- GRAD 5134 Interdisciplinary Topics in Engineering and Biology (14)

Graduate Students Advised
Graduated 13 Ph.D. students and 3 M.S. students. Currently advising 6 Ph.D. students
(Total advised: 22, all at Virginia Tech)

1. Martin Tanaka, Ph.D. 2008, Biomedical Engineering, currently an Associate Professor at Western Carolina University
2. Jeffrey Twigg, M.S. 2009, Engineering Mechanics, currently a Robotics Researcher at the Army Research Lab
3. Carmine Senatore, Ph.D. 2010, Engineering Mechanics, currently a Senior Associate at Exponent; previously Senior Research Scientist at the MIT Robotic Mobility Lab
4. Piyush Grover, Ph.D. 2010, Engineering Mechanics, currently an Assistant Professor at University of Nebraska-Lincoln; previously Senior Principal Research Scientist at Mitsubishi Electric Research Labs
5. Phanindra Tallapragada, Ph.D. 2010, Engineering Mechanics, currently an Assistant Professor at Clemson University
6. Tobias Dirksen, M.S. 2012, (co-advised with Mark Stremler, Hassan Aref, Tomas Bohr), Physics, Technical University of Denmark, currently Data Scientist at Frederiksberg Utility, Denmark.
7. Aaron J. Prussin, Ph.D. 2013 (co-advised with David Schmale), Plant Pathology, Physiology and Weed Science, currently Research Scientist at Virginia Tech
8. Samuel Raben, Ph.D. 2013 (co-advised with Pavlos Vlachos), Mechanical Engineering, currently Mechanical Engineer at the Food and Drug Administration (FDA)
9. Binbin Lin, Ph.D. 2013 (co-advised with David Schmale), Plant Pathology, Physiology and Weed Science, deceased
10. Amir E. BozorgMagham, Ph.D. 2014, Engineering Mechanics, currently Global Advanced Analytics Manager at Nike
11. Renee Pietsch, Ph.D. 2016 (co-advised with David Schmale), Biology, currently at the Food and Drug Administration (FDA)
12. Shibabrat Naik, Ph.D. 2016, Engineering Mechanics, currently a postdoc at University of Bristol
13. Isaac Yeaton, Ph.D. 2018 (co-advised with John Socha), Mechanical Engineering, currently a Research Engineer at the Johns Hopkins University Applied Physics Lab (JHU-APL)
14. Gary Nave, Ph.D. 2018 (co-advised with Mark Stremler), Engineering Mechanics, currently postdoc at University of Colorado Boulder
15. Nathaniel Hall, M.S. 2019, Engineering Mechanics, currently a Manufacturing Engineer at Kollmorgen
16. Peter Nolan, Ph.D. 2019, Engineering Mechanics
17. Jun Zhong, Ph.D., Engineering Mechanics, expected 2019
18. Kristen Tetreault, Ph.D. (co-advised w. Jonathan Black), Engineering Mechanics, exp. 2020
19. Thomas Liebau, Ph.D, Engineering Mechanics, expected 2022
20. Joshua Fitzgerald, Ph.D, Engineering Mechanics, expected 2023
21. Manu Nimmala, Ph.D, Engineering Mechanics, expected 2023
22. Albert Jarvis, Ph.D, Engineering Mechanics, expected 2023

Selected Competitive Grants

PI/co-PI on externally sponsored research projects totaling $10.2M; personal share, $2.3M

11. T. Iliescu, S.D. Ross (Co-PIs), "Data-Driven Computation of Lagrangian Transport Structure in Realistic Flows", NSF-Computational and Data-Enabled Science and Engineering in Mathematical and Statistical Sciences, 6/15/2018–5/31/2021, $200,000 (50% or $100,000)
10. S.D. Ross (PI), "Collaborative Research: A new framework for prediction of buckling and other critical transitions in nonlinear structural mechanics", NSF-Dynamics, Control and System Diagnostics, 9/1/2015–8/31/2019, Collaborative proposal with L. Virgin at Duke Univerisity. Total: $561,994; Virginia Tech portion $266,000 (100%).
9. T. Peacock, P.F. Lermusiaux, S.D. Ross, I. Rypina, S.C. Shadden (Co-PIs), "Hazards SEES: Uncovering the hidden skeleton of environmental flows: Advanced Lagrangian methods for hazards prediction, mitigation and response", NSF-AGS-SEES Hazards, 9/1/2015–8/31/2020, $2,811,000 (34% ($168,684) of Virginia Tech subcontract of $496,129).
8. S.D. Ross (PI), "Time-optimal control using front propagation methods", Virginia Space Grant Consortium, 8/10/2013-8/09/2014, $4,000 (100%)
7. S.D. Ross (PI), "CAREER: Integrating geometric, probabilistic, and topological methods for phase space transport in dynamical systems", NSF-Dynamical Systems, 6/1/2012–5/31/2019, $432,953 (100%)
6. S.D. Ross (PI), D.G. Schmale,"Dynamical Mechanisms Influencing the Population Structure of Airborne Pathogens: Theory and Observations", NSF-Dynamical Systems, 9/1/2011–8/31/2014, $429,931 (50% or $214,965)
5. S.D. Ross (PI), "Capture of an asteroid by way of a binary system", Virginia Space Grant Consortium, 5/16/2011-8/31/2012, $8,000 (100%)
4. M. Stremler, R. Davalos, D. Cimini, S.D. Ross, D.G. Schmale, "IGERT: Multi-Scale Transport in Environmental and Physiological Systems (MultiSTEPS)", NSF, 7/1/2010 - 6/30/2017, $3,000,000, (equally among 5 co-PIs, 20% or $600,000)
3. J. Socha, J. Harrison, M. Stremler, R. Davalos, S.D. Ross, P. Vlachos, I. Puri, R. De Vita, A. Staples, M. Agah, "EFRI-BSBA: Complex microsystem networks inspired by internal insect physiology", NSF, 1/1/2010 - 12/31/2014, $2,219,595, one of 10 co-PIs (8%, or $177,568)
2. S.D. Ross, D.G. Schmale, PIs, "Atmospheric Transport Barriers and the Biological Invasion of Toxigenic Fungi in the Genus Fusarium", NSF-Environmental Biology, 8/15/2009 - 7/31/2012, $413,476, (50% or $206,738)
1. S.D. Ross (PI), "Motor control effects of exercise on recurrent back pain," Ohio State University Research Foundation (subaward from NIH R01), 6/01/2006-4/30/2008, $86,637 (100%)
